

February STEAM

Ms. Windy and Ms. Jess

Dear STEAM Families,

January was a fun month in our STEAM classroom! Our young scientist, engineers, designers, artists and mathematicians worked hard to learn about shapes and how they help us build the structures around us; they enjoyed reading *3 Billy Goats Gruff* and designing bridges and boats and they all built amazing and creative things with cardboard boxes. In our final class of the month we moved further into coding with our second coding class of the year.

In February we will start off the month with our Winter STEAM class-- let's hope the weather stays cold so we can have some really fun experiments! Then we launch into an entire day of making hypotheses by conducting a series of exciting science experiments and guessing what will happen-- Ms. Jess and I can't wait to hear what the students will guess. We will wrap up the month with classes that explore airplanes and flying and our final class will be a fun day where we will be learning about STEAM in the fairy tale Rapunzel.

We look forward to the upcoming month!

Sincerely,
Ms. Windy and Ms. Jess
