

May Newsletter

I can't believe that we are already at the end of the school year. STEAM class has flown by. I hope your students have all enjoyed class as much as we have.

We had fun in April planting seeds. As of now, our lettuce and radishes have sprouted and we are still waiting for our beans. My favorite moment last month was watching the students try new foods, especially the kiwi! Our experiments included - the successful making of oobleck and crayons, to the not so successful dancing raisins, but that's ok! We learned how to build a sturdy house thanks to the Three Little Pigs and that water and oil DO NOT mix, but make for great experiments with food coloring.

We only have one class in May, but it's a big one! Eggs, eggs and more eggs. From experiments, painting and games, there's nothing you can't do with an egg!

This has been a great year and hopefully your children have learned a lot, while having lots of fun. We wish you all a wonderful summer!

Ms Jess and Ms Monica
