

## Pre K Class December Newsletter

November flew! In three short weeks, we packed a lot in and had lots of fun with LEGOs, learning about kinetic and potential energy, and of course some fun with “Don't Let the Pigeon Drive the Bus”.

With only 2 weeks of class in December we have a lot we want to get in too! Our first class is all about shapes, we will discuss the difference between 2D and 3D shapes and go on a shape scavenger hunt around the school.

Our last class before break will be Santa's science class and include some fun experiments with slime, reindeer toothpaste and making an elf trap.

We continue to use our coding skills with our coding mouse and also bring out the rollercoaster tubes for them to build with as they love making them and it's great to see how each week they get better and better with their knowledge of how best to build and work together.

Starting in January we will be doing a STEAMER OF THE WEEK. Each week a student will bring in something to share. It can be an experiment that we do together or something they have made at home or a collection they have. All we ask is that it is based on STEAM ideas. Some examples that we have had before are a LEGO creation they have built, a shell collection, pressed flowers, a lava lamp experiment, making play dough, toy robots, a rock collection, dinosaur eggs, melting ice blocks or a piece of art they have created. This will be child led so just let me know how long we might need and any instructions. I will send a sign up genius in December. We have 16 weeks left and 16 students so everyone will get to share & I can't wait to see what they will bring in!

Happy holidays!

Ms. Jess and Ms. Jamielynne
