

Welcome to a fun filled February!

We had a great month in January, our first few STEAMERS OF THE WEEK have done a great job and I'm looking forward to seeing what everyone brings in over the next few months. The highlight of January had to be melting the balls of ice, it was great watching them figure out the fastest way to make it melt.

We start off February with a class about Hypothesis, learning what the word means and doing some experiments to test out our hypothesis. We will combine this class with a challenge about Rapunzel. As we didn't get to do our recycling class this will be our second week, Mother's Nature is still coming to do a presentation and we will transform a box into something new and exciting! In balloon bonanza we will find out how resilient balloons can be and I'm sure pop a few balloons in the process! We'll finish the month with part two of kinetic and potential energy, we will recap what we learnt last time and do some experiments with balloons to see if it can power a car and we will try and see how fast we can run!

We are trying to keep all the students healthy so we have eliminated our snack time and have bought our lunch forward an hour. The students will always be placed 6 feet

apart when eating. If you have any questions please don't hesitate to email me jessgear@icloud.com

Ms. Jess and Ms. Jamielynne

Reminder - please send back your STEAMER work books,
