

February was an even shorter month due to the snow day but we will play catch up and try and fit the missing class in! Hopefully they have taken some of what they learnt from the recycling class and used that knowledge at home. We had a lot of fun with balloons, including powering a car with balloon power!

Pumpkin Jack is regrowing and we now have several shoots hopefully we will get to plant them when we get some warmer weather, please check him out!

We kick off March with the fairy tale Rapunzel and a hypothesis class. We will see how strong spaghetti is and how many drops of water a coin will hold.

Leprechaun traps will be needed for St Patrick's day and we will build planes and look and how they fly and see how far we can fly a paper plane.

We will learn about seeds that we can eat, we will look at our lunches and see what seeds we have and hopefully we will plant some vegetable seeds. We will do a seed tasting experiment to see who likes which ones, pomegranate is always the interesting one!

We'll finish the month off with a recap seeing what we can remember from some previous lessons.

The STEAMERS OF THE WEEK have bought in some great collections and experiments, they all love wearing the white coat and sharing their knowledge. If you haven't signed up yet and wish to just let me know.

Ms. Jess and Ms. Jamielynne
