

PRE K STEAM SEPTEMBER NEWSLETTER

We are finally ready to let off some STEAM!!!!

We will start the month off learning about the basics of the STEAM class. We will talk about expectations and working together and respecting our friends creations. We will also talk about good manners in the classroom and this is something we will come back to each week. Our first class is Monster Madness, we will have some fun centers and do an exciting experiment where they will learn how important it is to follow instructions. We will make a monster, making sure we have planned it out first, and then using only certain items to make it and making sure we have followed directions.

We will then move on Simple Machines where we will build a car and then “test it out”, a phrase we use a lot over the year as we do our challenges. We will talk about Levers, Pulleys, Ramps, Screws and wheels and axles.

The last two weeks of the month we will learn the difference between kinetic and potential energy, a very

fun class with lots of exciting activities planned, from building a roller coaster to rocket balloons and making a light bulb work using our hair!

Don't forget to pack a nut free lunch and water bottle!

See you all at 8.55 on Friday 10th September.

Ms. Jess and Ms Lisa
